

RE@Agile Practitioner

Advanced agile requirements engineering for leads, coaches and senior BAs.

2 DAYS

IREB

EXAM INCLUDED

THE COURSE

What you will learn.

RE@Agile Practitioner is the advanced certification for applying requirements engineering inside agile delivery at scale. Two days on the hard part. Multi-team, multi-product, compliance-heavy environments: requirements architecture across squads, traceability without waterfall overhead, and governance that still survives an audit.

It's aimed at senior business analysts, product leads, agile coaches and requirements engineers responsible for keeping requirements coherent across more than one team.

You gain the judgement to scale agile requirements without the practice collapsing at the dependencies. The prerequisite is the CPRE Foundation certificate, or an accepted equivalent such as the RE@Agile Primer, a BCS Practitioner certificate in RE, or a Product Owner certificate. The official IREB exam is included and the course is HRD Corp claimable.

Who should attend

- Agile coaches and Scrum masters working across multiple squads
- Senior business analysts moving into requirements architecture
- Product leads responsible for cross-team requirements coherence
- Heads of delivery accountable for governance and audit posture in agile environments
- Anyone holding RE@Agile foundation who has felt that toolkit start to creak at scale

QUICK FACTS

DURATION	2 days
HOURS	16 hours
LANGUAGE	English
CERTIFYING BODY	MSTB · IREB scheme
PREREQUISITE	CPRE Foundation certificate, or an accepted equivalent

MSTB · Malaysian Software Testing Board IREB · International Requirements Engineering Board

PER PARTICIPANT

Physical **RM 5,500**

Online **RM 5,300**
 **Official exam included**
HRD Corp claimable for Malaysian employers

Learning Outcomes

- ✓ Architect a multi-squad requirements model that does not collapse at the dependencies
- ✓ Design governance models that protect quality without throttling sprint cadence
- ✓ Coach other BAs and Scrum masters through the techniques you have learned
- ✓ Set up traceability that survives a regulator audit without reintroducing waterfall gates
- ✓ Lead the conversations between agile teams and the rest of the engineering organisation
- ✓ Pass the IREB RE@Agile Advanced examination on first attempt

Course Outline

01 What is RE@Agile

- The principles and practices of RE@Agile
- Where requirements engineering and agile methods meet

02 A Clean Project Start

- Vision and goals
- Specifying the system boundary
- Stakeholder identification and management
- Dependencies between vision and goals, stakeholders and the system boundary

03 Handling Functional Requirements

- Different levels of requirements granularity
- Communicating and documenting the different levels
- Working with user stories and backlog items
- Splitting and grouping techniques
- Knowing when to stop
- Project and product documentation of requirements

04 Handling Quality Requirements and Constraints

- Understanding the importance of quality requirements and constraints
- Adding precision to quality requirements
- Quality requirements and the backlog
- Making constraints explicit

05 Prioritising and Estimating Requirements

- Determining business value
- Business value, risks and dependencies
- Expressing priorities and ordering the backlog
- Estimating backlog items
- Choosing a development strategy

06 Scaling RE@Agile

- Scaling requirements and teams
- Criteria for structuring requirements and teams in the large
- Roadmaps and large-scale planning
- Product validation
